TECHNICAL SKILLS

Languages: Python, Java, C/C++, JavaScript, TypeScript, SQL

Frameworks & Libraries: Node.js, Express.js, REST APIs, Next.js, React.js, FastAPI, Springboot, Django, JWT, Prisma, Mongoose

AI/ML: LangChain, TensorFlow, PyTorch, Scikit-learn

Cloud & DevOps: Docker, AWS, Google Cloud Platform, Linux, Shell Scripting, CI/CD

Databases: MongoDB, MySQL, PostgreSQL, SQLite, Redis

Developer Tools: Git, GitHub, Postman, VS Code, Jira, Chrome Extensions

EDUCATION

MS Ramaiah Institute of Technology

Bengaluru, Karnataka, India

Bachelor of Engineering (Electronics and Telecommunication)

Dec 2021 – Jun 2025

- Relevant Coursework: Data Structures, Algorithms, Object-Oriented Programming, Databases, Operating Systems

EXPERIENCE

Full Stack Developer

December 2025 – February 2026

I2Global Virtual Learning

Bangalore, India

- Owned end-to-end development of 4+ production web applications (internal products and client-facing projects) using Next.js and Node.js, delivering scalable features across frontend and backend.
- Designed and optimized REST APIs with MongoDB, reducing redundant queries and improving average response efficiency by 25%.
- Implemented JWT-based authentication and collaborated with DevOps on deployments and iterative releases, contributing 170+ commits and improving release stability.

Backend Developer Intern

April 2025 – May 2025

Codtech IT Solutions

Remote

- Engineered and optimized RESTful APIs using Node.js and Express, improving response time through efficient routing, middleware design, and query optimization.
- Implemented JWT-based authentication and schema validation, improving API reliability and reducing backend error rates.
- Strengthened API robustness by handling edge cases, standardizing error responses, and improving request lifecycle management.

PROJECTS

Picky.Editor Chrome Extension | *React, Tailwind, Chrome Extension API*

picky-editor.vercel.app

- Built a developer-focused Chrome extension enabling real-time DOM inspection and manipulation for faster UI debugging.
- Implemented recursive DOM traversal to generate an interactive hierarchy tree for precise element targeting.
- Enabled instant Tailwind CSS code generation, reducing manual styling effort and improving development speed.

VidMetrics – YouTube Analytics Dashboard | *Next.js, Typescript, Redis*

vidmetrics-analytics-tool.vercel.app

- Built a YouTube analytics platform analyzing engagement velocity, upload cadence, and viral performance using YouTube Data API v3.
- Designed a multi-layer rate limiting and abuse protection system using Redis, including IP-based throttling, global request caps, and bot detection.
- Optimized API usage through caching and request control strategies to prevent quota exhaustion and ensure system availability.

Open VLA Powered Robot for Elderly Care | *ROS2, AI/ML, Edge Computing*

[IEEE Paper](#)

- Designed and implemented a modular end-to-end robotics system (voice → NLP → vision → action) using ROS2, enabling real-time task execution with less than 10s response latency and ~90% task success rate.
- Engineered a cost-efficient perception pipeline by replacing expensive depth sensors with monocular depth estimation (MiDaS), reducing hardware dependency while maintaining ~95% object detection accuracy.
- Deployed the system on edge (Jetson) without cloud reliance, improving availability and reducing inference latency; awarded **Best Paper Presentation (NMITCON 2025)** and published on IEEE.
